Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: upon close review of the claims, the prior art, and applicant's remarks in the Amendment filed on 12-08-2004 it appears that the allowance of claims 1 and 3-19 is appropriate.

2. Referring to the claimed invention, U.S. Patent No. 5,991,620 by Kingdon et al disclose a telecommunications system and method for distinguishing between 'busy for connection management due to positioning' and 'busy for connection management'. When a mobile terminating call arrives to the MSC/VLR for a subscriber that is marked as 'busy for connection management due to positioning', the MSC/VLR can place the incoming call in a queue until the positioning measurements are taken and the subscriber being positioned is put back in idle mode.

U.S. Patent No. 5,995,848 by Nguyen discloses a system for automatically completing calls to a busy mobile terminal. When a call is initially made to a busy mobile, an automatic callback service can be invoked. A gateway mobile switching center releases all the trunks from the calling party and notifies a service control point. The service control point periodically initiates a call attempt to the mobile terminal and when the mobile terminal is determined to be idle, the mobile terminal and the calling party is automatically connected.

None of the prior art disclose a movement determination unit that determines whether there is movement of a mobile station of a called party and signals reconnection of a calling party and the called party, as claimed in Claim 1, 15, and 18.

Art Unit: 2645

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
